## JOHNEX RECEIVES ISO 9001 ACCREDITATION

Johnex Explosives continuous commitment to high safety standards and improved product quality has resulted in the achievement of Johnex receiving the International Standards organization (ISO) 9001 accreditation for its Quality Management System at three of its facilities located in Kalgoorlie, Charters Towers and Perth Administration Office.

## “MAXIDRIVE<sup>®</sup>” CARTRIDGE EMULSION EXPLOSIVES RANGE PROVIDES A **HUGE** 14% COST SAVING

Australian Explosives Pty Ltd, a joint venture company between Chemrok Pty Ltd and Johnex Explosives successfully launched its new cartridge emulsion explosives product range in June this year. The product, appropriately named “MAXIDRIVE<sup>®</sup>”, has been welcomed by the industry and its customers are ecstatic with the product quality and blasting results achieved thus far. The Maxidrive product is a micro-sphere sensitized emulsion which provides a higher Velocity of Detonation (VOD) and drives ANFO up to a steady state faster. The micro-sphere sensitized emulsion minimizes “dead press” and also improves shelf life compared with traditional cartridge emulsion products. Unique packaging of our 32x180mm and 25x180mm product increases the number of boreholes that can be charged per 25kg case (approximately 14% additional charge-up capacity!)

For the latest technical data sheets and for more information on the full explosives range offered by Johnex Explosives, please refer to our website at [www.johnnex.com.au](http://www.johnnex.com.au)
